

Document: Checklist_[Team_X]_[Client_Team_Y1Y2]

Evaluator Team: Nhóm 12

Client/Target Team: [...]

Project: Rental Property Management Software

Date of Evaluation: 2026-05-23

Instructions

Mark [Pass], [Fail], or [N/A] for each criterion. Provide comments or issue descriptions if a test fails.

1. User Interface (UI) & User Experience (UX)

ID	Assessment Criteria	Status (Pass/Fail)	Comments / Notes
----	---------------------	--------------------	------------------

UI-01: The layout is responsive and displays correctly on different screen sizes (Desktop, Tablet, Mobile). []

UI-02: Navigation menus and routing work correctly without broken links or 404 errors. []

UI-03: Input forms have proper validation (e.g., correct email format, required fields are enforced, maximum length limits). []

UI-04: Error messages and success notifications (Toasts/Alerts) are displayed clearly to the user. []

UI-05: UI consistency is maintained (matching fonts, color themes, button styles) across all pages. []

2. Core Functionality (Business Logic)

ID	Assessment Criteria	Status (Pass/Fail)	Comments / Notes
----	---------------------	--------------------	------------------

F-01: Authentication: Users can successfully Register, Login, and Logout. Passwords are encrypted. []

F-02 Role Management: Proper access control is implemented (Admin vs. Tenant views; tenants cannot view other tenants' data). []

F-03 Tenant Management: Admins can Create, Read, Update, and Delete tenant profiles (including details like CCCD/ID, Date of Birth). []

F-04 Room/Contract Management: Admins can assign tenants to rooms, setup contract start/end dates, and manage contract statuses. []

F-05 Utility Readings: Admins can enter/update monthly meter readings (electricity, water) for each room. []

F-06 Invoice Calculation: The system correctly calculates monthly invoices based on rent, electricity, water, and other services. []

F-07 Payment Flow: Tenants/Admins can update payment status, and mock payment methods process correctly. []

3. Backend & API Integration

ID	Assessment Criteria	Status (Pass/Fail)	Comments / Notes
----	---------------------	--------------------	------------------

API-01:	All API endpoints return the correct HTTP status codes (e.g., 200 OK, 400 Bad Request, 401 Unauthorized).	[]	
---------	---	-----	--

API-02:	Data persists correctly in the database (e.g., creating a tenant reflects on subsequent page reloads).	[]	
---------	--	-----	--

API-03:	Image upload features (if applicable) upload and store images properly without crashing the server.	[]	
---------	---	-----	--

API-04:	Audit logging successfully tracks critical mutations (e.g., Contract changes, Room status changes).	[]	
---------	---	-----	--

API-05	The Frontend handles API delays gracefully (e.g., showing a loading spinner while fetching data).	[]	
--------	---	-----	--

4. Security & Performance

ID	Assessment Criteria	Status (Pass/Fail)	Comments / Notes
----	---------------------	--------------------	------------------

S-01	The system blocks unauthorized access to protected routes (Route Guards are working).	[]	
------	---	-----	--

S-02	Sensitive data (like passwords or payment tokens) is not exposed in frontend console logs.	[]	
------	--	-----	--

S-03	Database queries and lists (e.g., statistical reports) load within an acceptable timeframe (< 3 seconds).	[]	
------	---	-----	--

Overall Evaluation Summary

1. What went well (Strengths):

(List what the client team did excellently: e.g., the UI is very modern, APIs are well-structured).

2. Areas for Improvement (Weaknesses/Bugs):

(List major bugs or skipped requirements: e.g., Invoice totals calculated incorrectly when dealing with decimal numbers).

3. Final Verdict:

☐ Approved for Release / Project Passed

☐ Needs Minor Revisions

☐ Needs Major Fixes

If you have a specific word document/PDF template or exact requirements from your instructor regarding this checklist format, please paste the rules or upload them, and I will happily adapt this to match your exact format!
